Introduction to Disaster Management
Mini-Elective
Spring 2018

Course Dates: February 26, March 5, 12, 19
Mondays, 1:00-3:00 PM

Maximum Students: 10

Class Year: MS1

Course Director: Joe Suyama, MD
Associate Professor of Emergency Medicine

Contact Information: Joe Suyama, MD
412-641-6472; suyamaj@upmc.edu

Registration: Betsy Nero, Office of Medical Education
betsy@medschool.pitt.edu

Description: During this 4 session mini-elective, we will use the RaPiD-T (Recognition, Protection, Decontamination, and Triage/Treatment) model to teach a comprehensive all-hazards approach to help you understand how to manage catastrophic emergencies such as terrorist acts, natural disasters, and outbreaks of infectious diseases. To assist in the mitigation and response to large-scale mass casualty events, medical students and other health care workers should:

- Become knowledgeable of the clinical presentations of selected chemical, biological, radiological, and blast related injuries.
- Understand how to protect themselves and others from further harm
- Be able to communicate effectively with other emergency personnel and understand the organizational structures needed to manage both pre-hospital and hospital based disaster response
- Understand the risks inherent to working at the scene of a disaster

Course Objectives:
- To understand the clinical scope of the medical response to disasters
- To understand the pre-hospital and hospital based response to disasters
- To understand the need for a command structure for scene and hospital based mitigation and response to disasters

Requirements:
- Actively participate in all 4 course sessions.
- Reading assignments prior to sessions 2, 3 and 4
Course Outline
Introduction to Disaster Management

Course Director:
Joe Suyama, MD
412-641-6472
suyamaj@upmc.edu

Course Objectives:
- To understand the clinical scope of the medical response to disasters
- To understand the pre-hospital and hospital based response to disasters
- To understand the need for a command structure for scene and hospital based mitigation and response to disasters

Location:
Scaife Hall Rooms – 502 & 503
Times – 1:00-3:00 PM

Session One – February 26, 2018
Introduction to Disasters and Blast injuries
Objectives:
- To understand the scope of clinical conditions and health effects related to intentional and natural disasters and the response needed from a pre-hospital and hospital perspective
- To understand the clinical effects and response to blast injuries

Session Two – March 5, 2018
Biological Disasters and PPE
Objectives:
- To understand biological events, both intentionally and naturally occurring, and the pre-hospital and hospital response to these events.
- To understand the need and types of PPE available

Session Three – March 12, 2018
Chemical Disasters and Antidotes
Objectives:
- To understand chemical events, and the clinical conditions that occur naturally that assist in the clinical and operational response to these events
- To understand chemical antidotes and their limitations

Session Four – March 19, 2018
Radiological Disasters and Scene Management
Objectives:
- To understand the scope of radiological events, both intentional and unintentional, and the community and hospital based response to these events
- To understand the need for a command structure to deal with these events, and the current operational response available in Presbyterian Hospital and Allegheny County
