Behind the Veil of CSI: The Real World of Forensic Medicine
Spring 2010

Course Dates: February 22, March 1, 8, 22, 29
Mondays, 3:00-5:00 PM

Maximum Students: 8-10

Class Year: MS-1 and MS2

Course Directors: Karl E. Williams, M.D., M.P.H.
Medical Examiner, Allegheny County

Contact Information: Annie Marbury

Description:
The popularity of the television series CSI has radically changed the public perception of the world of Forensic Medicine. As entertaining as the series may be it pales in comparison to the variety, complexity and challenges that the practicing Forensic Pathologist encounters in their day to day work. This mini-elective will provide an overview of the practice of Forensic Medicine and provide for an opportunity for exposure to a full service Crime Lab.

In the United States, death investigation falls under the jurisdiction of either a Coroner or Medical Examiner. These two systems have radically different historical roots and the practice within jurisdictions varies widely from state to state and from county to county. In Allegheny County the Medical Examiner's Office operates under the 1953 Coroner's Code and has the responsibility for evaluating some 11,000 deaths a year, of which approximately 1,100 result in autopsies. Unlike many other jurisdictions the Medical Examiner also has direct responsibility for a full service Forensic Crime Lab that includes ballistic, toxicology, drug chemistry, fingerprint and DNA sections. This provides a direct linkage between the autopsy and the scene investigation that is often essential to resolving the basic questions of cause and manner of death.

The course will be based on presentation of individual real-life cases that illustrate the day to day practice in a major Medical Examiners system. An introduction to the basics of Forensic Science and Crime Scene Investigation will be presented.

Objectives:
- Enhance the participants knowledge of the scope and day to day practice of Forensic Medicine in determining cause and manner of death
- To gain a knowledge of the history and evolution of the current Coroners and Medical Examiner’s systems in the United States
- Explore and identify relevant patterns of injury and disease as they apply to the individual case evaluation in correlation with scene investigation
- Outline the basic disciplines of Forensic Sciences including ballistics, serology, toxicology, fingerprint and trace evidence

Requirements:
- Active participation in all class sessions and completion of assigned read-
ing, predominantly relevant articles from current literature.

**Course Outline:**
**Behind the Veil of CSI: The Real World of Forensic Medicine**

**Course Director:**
Karl E. Williams, M.D., M.P.H.

**Course Objectives:**
- Enhance the participants knowledge of the scope and day to day practice of Forensic Medicine in determining cause and manner of death
- To gain a knowledge of the history and evolution of the current Coroners and Medical Examiner’s systems in the United States
- Explore and identify relevant patterns of injury and disease as they apply to the individual case evaluation in correlation with scene investigation
- Outline the basic disciplines of Forensic Sciences including ballistics, serology, toxicology, fingerprint and trace evidence

**Class Format:**
A typical session will last for two (2) hours and consist of a 45 minute lecture, followed by an hour of individual case review. Ample time for direct interaction will be provided at all times.

**Locations:**
Session 1 only in Scaife Hall, Rooms 464 A&B
Subsequent sessions at the Medical Examiners Office, downtown Pittsburgh

**Session One: General Introduction and Overview—February 22, 2010**
- Review of the current status of the Coroner/Medical Examiner legislation and the history of evolution of the systems. General overview of the case load of a typical large forensic practice and the nature of determination of cause and manner of death.
- Overview of the post-mortem process
- Death certification

**Session Two: Overview of Forensic Pathology in Practice - I—March 1, 2010**
- Overview of the diversity of daily forensic practice
- Recognition of patterns of disease and injury across the various homicidal, natural, accidental, suicidal and undetermined manners of death
- Importance of case by case integration of scene and circumstances evaluation

**Session Three: Overview of Forensic Pathology in Practice - II—March 8, 2010**
- Continuation of Session Two

**Session Four: Overview of Forensic Science Disciplines and Application to Individual Cases—March 22, 2010**
- Review of Forensic Sciences disciplines:
  - Forensic toxicology
  - Forensic anthropology
  - Ballistics and tool marks
  - Blood stain pattern analysis
  - DNA/serology
  - Forensic entomology

**Session Five: On-site Visit to Morgue Facility and Crime Lab—March 29, 2010**
- Possible guest lecturer
- In-depth individual “CSI” case review
